### **Technical skills and competences**

#### **Organisation and development of a modern teaching and research centre meeting European standards (2006–2007), bringing together all restorative disciplines**

The facility has a modular structure based on a system of individual cubicles that provides greater patient comfort and improves the efficiency of the teaching process; each cubicle is equipped with dental units and a computer.

The teaching centre is equipped to European standards. The presence of computerised image acquisition and storage systems contributes to the creation of effective databases and the provision of competitive therapies, while supplying the infrastructure required for European-level teaching and research activities that integrate biomaterials, biotechnologies and biomechanical studies with the practical impact of clinical dental aspects.

Likewise, computerised image transmission combined with modern simulation techniques that precede practical procedures contributes to a teaching process of a high academic standard.

The computer in each cubicle provides access to the ProDent programme, an original software application designed around the particularities of each clinical entity. It combines the data required to prepare the medical record with three-dimensional simulation elements specific to each individual clinical case, with a significant impact on both the educational process and the provision of healthcare.

6 Centres of Excellence

#### **TECHNIQUES AND FIRST-IN-ROMANIA RESULTS:**

- Development, in accordance with ISO standards, of devices for testing the consistency of dental cements, their setting time, solubility and compressive strength, as well as a device for testing the hardness of metal alloys using the scratch-testing technique.
- Allergological studies conducted on patient groups to test acrylic and metallic materials;
- Corrosion studies of metallic materials in saliva and artificial media;
- Clinical, technological and biocompatibility research on dental ceramics and ancillary instruments (Contract No. 1114/27 February 1989).
- Research on the aetiopathogenesis, diagnosis and treatment of stomatognathic system dysfunctions (1991–1995); participation in the implementation of the contract with the Academy of Medical Sciences.
- Research on the behaviour of hydroxyapatite granules produced by ICPM Cluj-Napoca when used as implants for treating oral and maxillofacial bone defects (coordinator of Research Contract No. 332/1992–1994).
- Contributions to the development of new acrylic and silicone structures with a significant impact on dental practice, combining socioeconomic criteria with material performance (CNCSIS Research Grant No. 831/2006).
- Optimisation of implant surfaces through the deposition of active hydroxyapatite, laying the foundations for the concept of periosteal integration (CNCSIS Research Grant No. 61/2006).
- Creation of an original clinical record for each clinical entity and original software providing genuine support for practitioners and students (PRODENT).
- Organisation and development of a modern teaching base meeting European standards (2006–2007), bringing together all restorative disciplines.
- Founding in 2014 of the International Institute of Medical Sciences and Biotechnologies, unique in Romania, intended to stimulate and support cutting-edge medical research.
- Seven Centres of Excellence created using resources provided by European projects, unique in the Romanian academic environment and equipped with leading national and European technology. They open pathways for students to achieve high performance and enrich their specialist knowledge, while encouraging professional definition and development according to their aptitudes.
  - Centre for Specialist Training and Resources in Oral Rehabilitation
  - MEDCAREER Centre for Medical Imaging through Virtual and Augmented Reality Technologies
  - Interdisciplinary Centre for 3D Simulation and Assistance in General and Oro-Maxillofacial Rehabilitation
  - Centre for Robotics in Dental Medicine
  - Digital Smile Design Centre
  - Centre for Surgical Lasers in Dental Medicine
  - Centre of Excellence for Child and Adult Patients with Psychomotor Disabilities (2019)
- **Three new disciplines created:**
- The Maxillofacial Prostheses discipline (2004) within the Faculty of Dental Medicine and the creation of a dedicated work unit under the research grant “Plastic-Surgery Intervention versus Epithesis in the Oro-Maxillofacial Region”, unique in Moldova. This enabled the first epitheses to be made, allowing maxillofacial surgery patients to receive prosthetic rehabilitation and eliminating the mutilating effect.
- ROBOTICS AND 3D SIMULATION IN DENTAL MEDICINE (fourth year of study)
- REHABILITATION WITH SURGICAL LASERS IN DENTAL MEDICINE (sixth year of study)
- .
- Introduction into Romanian medical education of the concept of periosteal integration, a complex concept that ensures the viability of implant-prosthetic solutions. Its foundation was supported by fundamental research on the deposition of active hydroxyapatite on implant surfaces, a research direction reflected in national CNCSIS grants and in a European project on this topic to be submitted in the October competition.
- Starting from the relationship between theoretical training and practical applicability, with the dentist–dental technician–nurse triad acquiring notable importance, I implemented this integrative concept for the first time in the curriculum of the Faculty of Dental Medicine in Iași and, likewise, for the first time in Romania. These aspects support competitive dental-care activity aligned with the requirements promoted by the European Union. This triad concept is also reflected in the structure of the syllabi and timetables for the faculty and the two specialisations, ensuring a harmonious integration of knowledge in the natural

sequence of the clinical-technological algorithm. For the 2008–2009 academic year, several courses fully aligned with the European curriculum were introduced for the first time in Iași, Romania, leading to competitive training for dental technicians in every area required by contemporary dental medicine:

- Maxillofacial Prostheses and Epithesis Technology
- Epithesis Technology Using Different Retention Systems
- Dento-Stomato-Facial Aesthetics
- Oral and Maxillofacial Surgery and the Technology of Surgical Appliances
- Technology of Orthodontic Appliances

The elective courses introduced and taught at the Faculty of Dental Medicine also provide approaches to cutting-edge fields and topics in dental practice, fully aligned with the requirements governing dental medicine worldwide:

- Non-invasive Diagnostic Methods in Dental Medicine
- Clinical Implications of Nanotechnologies and Materials in the Treatment of Partial Edentulism
- Attachments and Telescopic Systems in Extensive Partial Edentulism
- Diagnostic and Treatment Methods in Alternative Dental Medicine
- Non-invasive Treatment Methods and Means (Laser Therapies) in the Rehabilitation of Extensive Partial Edentulism
- Introduction of the minimally invasive diagnosis and therapy concept, reflected in the inclusion of non-invasive diagnostic methods, such as computerised thermography, and alternative treatment methods (laser therapy) in the student curriculum, with further development within master's degree studies.
- First nationwide introduction of population screening of oral status in relation to general health, with a view to establishing a national adult prevention programme.
- **Five invention patents in oral implantology concerning the sterilisation and disinfection of accessories used with dental-medical equipment:**

**1. Mini-box for disinfection using non-ionising radiation**

**2. Air ozonation module**

**3. Aseptic container**

**4. Process for obtaining a dental composite for relining dental prostheses**

**5. Counter-current air disinfection installation**

**Twelve trademarks protected by OSIM.**
